**Printable solutions for  
your industry**

**Novelinks Sp. z o.o.** is a newly formed spin-out from the Warsaw University of Technology (WUT), Poland. The company was created by experienced scientists and PhD students from the University as well as its Institute of Applied Research (Instytut Badań Stosowanych Sp. z o.o., Politechnika Warszawska).

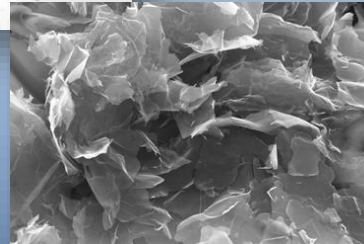

**Mission** of the company is a transfer of innovation we create in the laboratories into the market, helping smaller and larger customers to become competitive in the constantly changing technology world.

## Advanced composite materials for printed electronics

- pastes
- inks
- paints
- glues
- suspensions

- conductive
- resistive
- dielectric

- graphene
- graphite
- carbon nanotubes
- micro/nanosilver
- platinum
- etc.

## Advanced composite materials for printed electronics

- screen printing,
- spray coating,
- ink-jet or
- aerosol jet
- Roll-to-roll

- functional layers
- coatings
- electronic paths
- resistors
- Sensors
- transparent electrodes
- flexible electronics
